Indea: X Sparse ( not all) Primary John John John Block

So we can make Pointer for Block

index key + record number

Clustering. 7X Single Level clustering, / - Come regul to we can make Pointer for each without reduce.

They + records distinct value. Index key + records Secondary on toward JEIJ(s (primary) or insertion of index key = records 1 John - Krew John John So we make 3 Block Po have 3 ways to inflehent Level ( Create Primary index to the single level index) Create B-Tree and B+-Tree
